
New Engineer Onboarding Checklist

Week 1

- Laptop setup with the local dev env script (target: first build in under an hour).
- SSO and multi-factor auth enrollment; request roles via the IAM catalog.
- Read the developer handbook and the architecture overview.
- Ship a starter change through the deploy guide with your onboarding buddy.

Month 1

- Team topologies session: know your stream-aligned team and its platform contacts.
- Write your first RFC or review one (RFC process fast-track welcome).
- Tour the observability stack: Grafana dashboards, Prometheus alerts, Datadog tracing.

Months 2–3

- Shadow the oncall rotation; walk one incident with the runbook.
- Complete Kubernetes training and the security review process module.
- Pick a roadmap project with your manager (see engineering OKRs).
