

Data Privacy Policy (Internal)

Scope

Applies to all systems processing customer personal data: the auth service, billing, analytics, and support tooling. Aligns with GDPR compliance and the data classification standard.

Handling rules

PII is classified Restricted: encrypted at rest, access via short-lived roles reviewed in the quarterly IAM audit, and every access recorded by audit logging. Data retention policy caps raw event storage at 13 months; deletion requests complete within 30 days across primaries, replicas, and backups.

Subprocessors

Subprocessor changes require a DPIA, legal sign-off, and 30-day customer notice. The current register lives with the vendor contract summary; tenant isolation guarantees are re-validated when any subprocessor touches multi-tenant data.
