

FEATURE FLAG CLEANUP LOG — monthly sweep, June 2026

Policy: flags older than 90 days past full rollout are deleted (see the feature flags guide). Stale flags caused the May billing outage bypass — this log is the guardrail.

Removed this month (11):

- promo-engine-v1-fallback (superseded by v2)
- billing-webhooks-retry-legacy
- search-cursor-pagination-beta (100% for 5 months)
- sso-group-mapping-fix (permanent since rev 12)
- canary-search-service, canary-auth-service (canary deployments are default)
- i18n-date-format-v2, dashboard-dark-mode-beta
- eks-upgrade-drain-guard (upgrade complete)
- migration-linter-bypass (DELETED — root cause of the May incident)
- nat-gateway-dual-stack

Kept with justification (3):

- enterprise-tenant-isolation (launch gate, owner: platform)
- usage-billing-shadow-mode (finance reconciliation through Q3)
- promo-engine-v2 (launch gate, owner: billing)

Next sweep: July 28. Owners notified via the weekly eng sync.
