

Engineering Hiring Plan — H2 2026

Headcount

Eighteen open roles across platform, product engineering, and SRE. Priorities: two SRE seats for the oncall rotation, three billing engineers for usage billing and the promo code engine, and a staff engineer for tenant isolation.

Process

Structured loops with published rubrics from the developer handbook. Every loop includes a code review exercise and a systems design session scoped to team topologies. Time-to-decision target: five business days.

Onboarding

New hires follow the 30-60-90 onboarding plan: local dev env on day one, first deploy in week one via the deploy guide, oncall shadowing in month two, and a starter project from the product roadmap by month three.
