

## **Incident Response Training**

SRE onboarding · severity, roles, and the first 15 minutes

### **Severity levels**

SEV1: customer-facing outage or data loss — page the incident commander

SEV2: degraded service, error budget burning — page the oncall rotation

SEV3: contained issue, no customer impact — ticket and fix in hours

When in doubt, declare higher and downgrade later

### **Roles**

Incident commander: owns coordination, never debugging

Ops lead: drives mitigation from the incident runbook

Comms lead: status page and stakeholder updates every 30 minutes

Scribe: timeline in the incident channel for the post-mortem

### **First 15 minutes**

Acknowledge the PagerDuty page and join the bridge

Check Grafana dashboards and Prometheus alerts for blast radius

Mitigate first: rollback, feature flag off, or shed load

Root cause hunting waits until customers are stable

### **After the incident**

Blameless post-mortem within five business days

Action items tracked to closure in the runbook review

Audit logging timeline attached for compliance evidence
