

Customer Case Study — Acme Logistics

Challenge

Acme Logistics ran usage reporting on spreadsheets: invoices took nine days, disputes were common, and finance had no live view of consumption across 40 depots.

Solution

Acme adopted the platform's usage billing with the customer onboarding fast-path: SSO via Okta on day one, historical import in week one, and Salesforce sync for account data. Feature flags let Acme pilot depot-level dashboards before the global rollout.

Results

Metric	Before	After 6 months
Invoice cycle time	9 days	Same-day
Billing disputes / quarter	31	4
Finance hours on reconciliation	120 / month	18 / month

"The first month closed itself. Our auditors asked what changed." — VP Finance, Acme Logistics
